Ferrari F40 Competizione

No.KS08602CR Length: 390mm

Commemorating Ferrari's 40th anniversary, the F40 was the last Ferrari personally approved by founder Enzo Ferrari. As the competition model, the F40LM was designed for racing while the Competizione was the model built at customer request. The F40 featured a front cowl with cooling air duct, large round 4-lamp headlights, large front spoiler, and variable rear wing, all combining to deliver improved cooling and aerodynamics for racing. Modified suspension, weight stripped from the interior and exterior, and safety standard 4-point harness with driver's seat side bar, were true to its motorsports focus. While the basic 2.9-liter V8 twin-turbo is the same as the F40, larger turbochargers and intercoolers increasing supercharging pressure and combined with revised engine management to produce 700ps (official Ferrari data) and significantly faster performance. With less than 20 units produced including the LM racing model, this Ferrari became a valuable collector's item.

The Competizione's interior is even racier than the Spartan feel of the F40. It is equipped with a side bar for driver protection, digital meters, and a fire extinguishing system. The shift knob has also been made larger to improve operability.

Removal of the front cowl reveals the steel tube frame and double wishbone suspension. The radiator is diagonally set for efficient wind flow with a duct installed to cool the brakes.

Designed for motorsports, the Competizione features acrylic side windows with a sliding function instead of a typical lifting mechanism to reduce weight.

The muffler used the same three pipes as the F40 with the center exhaust as the wastegate for controlling the turbo pressure.

1:12 SCALE
Ferrari F40 Red
No.K508602R Length: 374mm
Subject to Approval

As with many racing machines, the front cowl can be removed, and the rear cowl opens wide for easier maintenance. In addition to these features, internal parts have also been reproduced in fine detail in this diecast model.

Fiat Nuova 500
No.KS08966R Coral Red
No.KS08966LB Celeste Blue
No.KS08966LG Green Clear
Length: 169mm

Due to its RR layout, opening the front hood of the Nuova 500 reveals not the engine, but the fuel tank as well as trunk space for the spare tire and other items.

Initially the Nuova 500 featured rear-hinged front doors. However, these were changed to standard front hinged doors in 1965 to comply with new safety standards. At the same time, the front window and rear combination lamps were made larger.

Despite being less than 3 meters long, there is enough space to accommodate four adults. The simple metal dashboard is the same color as the body and the only gauge is a speedometer. Large diameter steering wheel with thin grip reflects the period.

Produced from 1957 to 1975, the 2nd generation Fiat 500 was Italy's beloved national car and became an icon of the 20th century alongside Britain's Mini and the German VW Beetle. The first-generation Fiat 500 was launched in 1937 and commonly known as Topolino meaning 'little mouse'. The 2nd generation was named Nuova 500 (Nuova Cinquecento) which is 'new' in Italian to distinguish it from its predecessor. The Nuova 500 'prima serie' was the earliest model, released for only

a few months starting in July 1957, and was available only in a convertible body. It was as basic as possible to reduce cost with two front seats, fixed side windows except for the push open triangle section, and no luxurious body decorations. The lightweight body weighed less than 500kgs and was powered by a 479cc air-cooled in-line 2-cylinder OHV engine mounted in the rear that produced 13ps.

The vertically rear mounted 479cc air-cooled inline 2-cylinder OHV engine delivered a maximum output of only 15ps. However, this delivered speeds of up to 90km/h in combination with the 4-speed manual transmission due to the body weighing less than 500kg.

1:18 SCALE
Morris MINI Minor
No.KS08964BL Clipper Blue
No.KS08964R Cherry Red
No.KS08964W Old English White
Length: 170mm

Born in 1959, the Mini remained in production without a major model change until Britain's 'Little Giant' rolled off the line for the last time in 2000. The history of the Mini begins with the Morris Mini Minor in 3 body colors (Cherry Red, Clipper Blue and Old English White) and its twin brother 'Austin Seven' in different color variations (Tartan Red, Speedwell Blue and Farina Grey). Due to organizational changes coinciding with minor modifications, the car name was unified to 'Mini' in October 1969. Mini's greatest innovation over 60 years ago was to create the highly efficient blueprint for modern compact cars. With a length of about 3 meters, 4 adults could be accommodated inside the Mini's small body, which was groundbreaking at the time. The Mini was also the world's first production passenger car to feature front wheel drive with a horizontally mounted engine, another legacy of Mini design.

The Mini was the first compact car to adapt 2-box style FF horizontal engine layout which is now a standard in modern compact cars.

The small engine room holds an A-series 848cc 4-cylinder OHV engine that produces 34ps.

Simple instrument panel only includes a circular speedometer. The long straight shift lever from the floor is also a distinguishing feature of the early model.

For two-door cars, it is common to fold the seat back forward to access to the rear set. However, for the Mini this is done by lifting and tilting the front seat forward.

Porsche

1:18 SCALE
Porsche 911 (901)

Unveiled at the Frankfurt Motor Show in Germany in 1963 as the successor to its first '356' sports car, the Porsche 911 continues to this day. Revealed as the '901' at the motor show, the name was changed to 911 (while the model number remained 901) when it was commercialized in 1964 as the 3-digit number with a zero in the middle was registered by Peugeot. As they say, the rest is history. While the coupe-style body was inherited from the 356, the 911 added practicality with a small rear seat, making it a 2 + 2 seater. Using the same basic engine layout with air-cooled horizontally opposed rear mounted engine, the displacement was increased from a 1.6-liter 4-cylinder OHV to a 2-liter 6-cylinder SOHC (only the initial version included the 4-cylinder OHV). The transmission was also enhanced from 4-speed to 5-speed delivering top speeds over 200km/h, on par with other European sports cars. Porsche's annual performance improvement system resulted in six changes until the 930 model in 1974 (NA continued until 901 model in 1977). By refining the chassis and increasing displacement to elevate performance, the 911 established itself as one of the most iconic sports cars in the world.

Subaru's renowned EJ20 horizontally opposed turbo engine was in action until Subaru withdrew from the WRC in 2014. The intercooler, which was water-cooled in the Legacy era, was changed to air-cooled in the Impreza. The exquisite horizontally opposed exhaust manifold is also a signature Impreza design feature.

Displays such as the switches, indicators, and the rally computer built into the dashboard are recreated with water transfer decals, some are pad (tampo) printed. Thin and highly adhesive, this achieves superior reproduction quality and eliminates the thicker, unsophisticated finish of past processes.

 Length: 250mm

The carbon Kevlar pattern on the back of the full bucket seats is transcribed from photographs. If the pattern is simply scaled down the pattern becomes lost, so the scale has been adjusted to suit the interior styling. Each part is also precisely molded.

Accurate recreation of the roll cage, which is a feature of rally and motor sports cars, was achieved through extensive trial and error as it was difficult to extract from the mold. While seatbelts and bands can be recreated with molds, they become too thick, so these are cut from sheets.

1/64 MOTN LED BASE SYSTEM

New style of miniature car display
Light up a stylized scene with just one touch

NISMO 400R, NISMO R34 GT-R CRS, NISMO R35 GT-R GT3

1/64 MOTN LED BASE SYSTEM

The MOTN system allows you to turn on the lights just by placing a 1/64 scale miniature car on it. It's a groundbreaking item that brings a new style to miniature car displays.

No.K07125

Easy setup: just plug in the cable and place the product on

The only cable that connects to the base system is a USB Type-C cable. You will need to prepare that cable separately, but it can be the one you use to charge your smartphone. To actually turn on the light, just place the compatible product on the minicar base and place it on the base system. Since it is a non-contact type, there is nothing to worry about. It fits perfectly into the minicar case, so it can be neatly displayed as interior decor.

High quality lighting even at 1/64 scale

Only a USB type-C cable can be connected to the base system and is required to be purchased separately. This is the standard cable used to charge many modern smartphones. To activate the light, simply place the model on the minicar base and place it on the base system. The contactless function is simple, safe and easy to operate, and fits perfectly into the minicar case for as stylish interior display. An LED on the bottom indicates the status of the main unit and will indicate if any abnormal issue.
